

How to Obtain a Replacement Data Plate for a Manufactured Home

A group called IBTS can, in many cases, provide a replacement Data Plate for a manufactured home. If a copy is not available, they can provide a substitute "Performance Verification Certificate" generated based on the original destination of the home.

A replacement can be very helpful in moving a home into a Wind Zone II county when officials demand verification that the house was built to Zone II standards.

Below is a link to the IBTS website that provides this service (costs \$50-125 depending on how fast you need it):
